DETAILED ACTION

Allowable Subject Matter

Claims 1-14 are allowed.

The following is an examiner's statement of reasons for allowance: (...).

The primary reasons for allowance for claims 1 and 14 are the inclusion of the limitations of a printing method and a printer comprising means for dividing an image into segments containing different types of information and selecting different ones of stored compensation strategies for printing different segments of the image. It is these limitations, either alone or in combination as claimed, that have not been taught, found, or suggested by prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Couwenhoven et al. (US Patent 6,354,689) discloses a method of compensation for malperforming and inoperative ink nozzles in a multitone inkjet printer, so that high quality images are printed although some ink nozzles are malperforming or inoperative. A swath data signal contains the data that will be sent to the printhead to print one pass of the image. Each row of the swath data signal contains the data that will be printed by a particular nozzle during the pass. The nozzles are organized in groups, each nozzle group including a first nozzle which prints along a first row of image pixels, and at least a second nozzle which is capable of printing along substantially the same row of image pixels as the first row.

Koitabashi et al. (US Patent 6,908,176) discloses a method for compensating for a bad nozzle in such a manner that the nonuniformity of an image resulting from an anomaly such as an unwanted white line be undetectable to the human eye. The method comprises the steps of identifying non-operative nozzle, discriminating an image recorded by said recording head, providing different supplementing manners for supplementing defects in a recorded image resulting from a non-operative nozzle, selecting a supplemental manner from the different supplementing manners, effecting control in accordance with the selected manner, and effecting recording with supplementation for the non-operative nozzle through the selected manner.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jannelle M. Lebron whose telephone number is (571) 272-2729. The examiner can normally be reached on Monday thru Friday 8:30am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen D. Meier can be reached on (571) 272-2149. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
